Sales Performance Overview: Yearly Quantity & Monthly Revenue

Quantity Sold by Year

KEY INSIGHTS

Quantity sold was at its peak in 2014 (43,26%)

Lowest quantity was in 2013 at 0,30%
A steady decline is seen after 2014.

A steady decline is seen after 2014, with quantity sold decreasing by 26.1% from 2014 to 2015 (highest decline)

Total Sales Amount by month

KEY INSIGHTS

Sales peaked in May at over 21M after steady first half growth.

Sharp drop in July to R23M, with a temporary recovery in August.

Second half declined overall, with November being the lowest month

Sales & Cost of Sales Trends by Year

KEY INSIGHTS

Both Sales and cost of sales peaked in 2014 at 75M before declining steadily.

Sales and cost of sales tracked closely throughout, with sales remaining slightly higher.

By 2016, both had fallen to around R47M, reflecting a consistent downward trend after 2014

Daily Sales Performance & Gross Profit Analysis

Total Daily Gross Profit % & Unit Sales Price by Day				
Day Name	Total Sales (R)	Daily % Gross Profit	Daily Sales Price per Unit	Daily Percentage Gross Profit Per Unit
Friday	36 797 095,51	46,69	11,76	0,00
Monday	23 603 268,26	44,88	12,50	0,00
Saturday	41 857 088,96	46,67	11,85	0,00
Sunday	20 725 628,54	45,56	11,78	0,00
Thursday	21 162 713,74	46,42	11,61	0,00
Tuesday	20 734 543,55	48,68	11,55	0,00
Wednesday	22 029 489,56	47,50	11,83	0,00
Total	186 909 828,12	46,78	11,86	0,00

KEY INSIGHTS

Saturday generated the highest total sales **(41.9M)**, while **Tuesday** had the lowest **(R20.7M)**

Tuesday achieved the highest the highest daily gross profit **(48.68%)**, despite the lowest unit sales price **(R11.55)**.

Monday recorded the lowest gross profit % **(44.88%)** but the highest average unit price **(R12.50)**

Average Unit Sales Price Trend (2013 – 2016)

KEY INSIGHTS

Average unit price jumped dramatically from R74.1 in 2013 to 13.5K in 2014.

Prices remained stable at R13.5K through 2015.

A decline occurred in 2016, with the average unit price falling to R11.9K.

Share of Quantity Sold by Week Days

Highest to Lowest Total Sales by Month

Distribution of Daily Sales Price per Unit by Quantity Sold

Findings, Conclusions & Recommendations

Findings

Volume and revenue peaked in 2014 then declined steadily. Quantity sold rose from 16.1K (2013) to 2.3M (2014), then fell to 1.7M (2015) and 1.3M (2016). Total Sales and Cost of Sales followed the same pattern, peaking near R75M in 2014 and dropping to ~R47M by 2016.

Average unit sales price jumped from R74 in 2013 to R13.5K in 2014–2015, then declined to R11.9K in 2016.

Monthly sales were strongest in the first half of the year (peak in May at >R21M). A sharp drop occurred in July, with a partial recovery in August, followed by progressive weakening into November (lowest month).

The daily performance table provides the clearest operational insight: Saturday generates the highest total sales (R41.9M), while Tuesday delivers the highest daily gross profit % (48.68%) despite the lowest sales volume and unit price. Monday shows the opposite pattern — highest unit price but lowest gross profit %. Overall average daily gross profit % was healthy at ~46.8%.

Sales and Cost of Sales tracked very closely across years, indicating relatively stable cost structures but limited margin expansion.

margin expansion:
indicating relatively stable cost structures but limited

Conclusions

The business experienced strong growth up to 2014, followed by a clear multi-year decline in both volume and revenue.

Unit pricing power weakened in 2016 after two years of high and stable prices.

Sales are highly seasonal (stronger first half) and day-dependent (volume concentrated on weekends, better margins mid-week).

The daily gross profit and unit price analysis is particularly valuable because it reveals a clear volume-versus-margin trade-off across the week — actionable insight that the yearly and monthly charts alone do not provide.

Despite solid gross profit percentages (45–49%), the combination of falling volume and lower unit prices is eroding absolute profit. Cost of sales has moved almost in lockstep with sales, suggesting limited improvement in cost efficiency.

efficiency

Recommendations

Treat the daily performance insights as a core planning tool — protect and grow high-volume days (especially Saturday) while actively improving margins on high-percentage days (Tuesday–Thursday).

Arrest the volume decline — investigate root causes of the post-2014 drop (competition, product mix, market conditions, distribution) and develop targeted recovery plans.

Protect and optimise pricing — review the 2016 unit price reduction and test selective price increases or value-added bundles, especially on high-margin weekdays.

Improve second-half performance — develop specific strategies for July–November (the weakest period), including seasonal promotions, inventory planning, and demand-generation activities.

Monitor cost of sales closely — pursue supplier negotiations or operational efficiencies to widen the gap between Sales and Cost of Sales.

Continue refining day-of-week analysis and conduct a formal competitor pricing comparison to identify further pricing and margin opportunities.

pricing and margin opportunities:
conduct competitor pricing comparison to identify further
